a) The Kalamazoo Historic District Commission is empowered to regulate Work on the exterior of historic resources and non-historic resources in historic districts in the City of Kalamazoo and shall otherwise have all powers invested in Historic District Commissions pursuant to the Local Historic Districts Act, MCLA § 399.201 et seq. 1970 PA 169, as Amended 1992.
b) To regulate Work on resources which, by City ordinance, are historic or non-historic resources located within local historic districts, including but not limited to the moving of any structure into or out of, or the building of any structure in, an historic district.

The following documents are available in the Community Planning and Economic Development Department located at 245 North Rose Street. These documents will help assist property owners in understanding the responsibilities of owning property in a local historic district: MCLA § 399.201 et seq. 1970 PA 169 as Amended 1992 (Michigan Local Historic District Act); Code of Ordinances City of Kalamazoo, Michigan (Chapter 16 - Historic District); Secretary of the Interiors Standards for Rehabilitation & Guidelines for Rehabilitating Historic Buildings, 1990; Standards and Guidelines for Kalamazoo Historic Districts, and maps of Kalamazoo Local Historic Districts. These documents and maps are also available on the city of Kalamazoo website at www.kalamazoocity.org/historicpreservation.

GUIDELINES FOR PUBLIC PARTICIPATION AT HDC MEETINGS

The Historic District Commission recognizes that citizens who make the effort to attend a Commission meeting often feel passionately about an issue. The following guidelines are not meant to discourage individual expression; rather, they exist to facilitate the orderly conduct of business and to ensure that all citizens who wish to address the Historic District Commission are able to do so in an atmosphere of civility and respect.

- Out of respect for business being conducted during the meeting, turn off all cell phones and pagers prior to the meeting.
- Citizens have opportunities to address the Historic District Commission at the following times during a meeting:
  - Address Non-agenda items at the beginning of the meeting. If you wish to speak about a specific review, please wait until that review comes to the commission.
  - Consideration of Regular Agenda items. Citizens are permitted to speak to the Commission on project reviews after the applicant has made their presentation and prior to the Historic District Commission discussion. The Chair will call for comments from the public.

A Note on Quorum and Historic District Commission Decisions

City of Kalamazoo Code of Ordinance – Chapter 16 – Historic District Commission – section 19 states: "A majority of the members of the Commission shall constitute a quorum. A majority of the appointed members is required to take action on all matters not of an administrative nature, but a majority of a quorum may deal with administrative matters." All applicants should be aware that the minimum of four of the commissioners must vote for a motion for a decision to be made in all actions. Applicants may choose to postpone their review to the next regularly scheduled meeting of the commission before the commission begins their deliberations if fewer than seven commissioners are present. The postponement form is available from the coordinator and must be filled out and signed before the applicant leaves the meeting.

Historic District Commission Staff Report

City of Kalamazoo

TO: The Kalamazoo Historic District Commission

FROM: Luis Pena, Historic Preservation Coordinator

DATE: April 21, 2026

SUBJECT: 1. 703 S Park - Alteration (removal of existing deck, construction of new deck) PHDC26-003

PROPOSED WORK:

From the Description of Work Supplied by the Applicant: repurposing and replacing side porch. Eliminating roofed portion to make the area more useful for tenants (Grilling). Plan is to remove steps making deck only be accessible from inside the house as an added safety measure. Deck size is negotiable but plan now is 9.5' along house and extending 6' from house.

EVALUATION:

Project Details

Removal of an existing rear/side (south face) porch, installation of a step-less deck in place of the historic porch.

Applicable Critera

Secretary of the Interior's Standards for Rehabilitation

2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.
The side porch is a projection that contributes to the overall shape of the structure, and therefore the character of the structure. It should be noted, however, that the existing porch is toward the rear of the property and only a single story tall.

6. Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.
The existing side/rear porch should be repaired rather than replaced. The side porch is likely original to the house, as it appears on a 1908 Sanborn map.

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.
The proposed deck would be differentiated from the property stylistically (the deck would not have a roof or stairs). The proposed deck would also be roughly 9.5' x 6', projecting a third of the width of the house.

Local Historic District Standards and Guidelines:
Decks: Decks are allowed on the rear of a structure and may be constructed of cedar, cypress, redwood or pressure treated lumber. They should be placed in an unobtrusive location and be minimally visible from the street. Decks are exempt from the painted exterior woodwork requirement. Rails should be to standards as above but may be of pressure treated lumber and may be taller than porch rails, as required by the building code for the chosen site. Very low decks may not need a rail. The decking boards should be 5/4 lumber laid with small gaps between the boards. The boards may be parallel or perpendicular to the body of the house. The flooring boards should extend past the support framing over an apron board. A lattice porch skirt may be attached under the deck, using materials and techniques as specified for porches in the standards.
The proposed deck would be highly visible from the street, as it would be located on the side of the property (towards the back of the house).

Discussion
The existing porch is a character defining feature of the property, and should be preserved. The proposed porch would not be stylistically compatible with the historic structure, and the proposed porch would be about a third the width of the main structure.

POTENTIAL ACTIONS:

1. The proposed work complies with the Secretary of the Interior standards 2, 6 and 9. **Action: Motion to approve a Certificate of Appropriateness for the work as described in the application.**

2. More information is needed. **Action: Motion to postpone until the HDC meeting on 19 May 2026 and direct the applicant to provide the requested materials and information to the Historic Preservation Coordinator by noon on 12 May 2026.**

3. Denial of the application. **Action: Motion to deny the application based on Secretary of the Interior Standards 2, 6 and 9**.

Proposed Work: What work do you plan to do? Please be as specific as possible including a complete description of the part of the structure where work will be done.

Example #1: Rather than "Build new garage"
Say "Build new two car garage near northeast corner of lot, wooden frame with clapboard siding, paneled metal overhead door, service door on the north side and one window at the rear. "
Example #2: Instead of **"**New front door"
Say "Install a new wooden front door to fit original opening in width and height, to replace the existing metal paneled door. See drawing/photo for appearance" Specify the measurements of the width and height of the original opening. Include a storm door if that is part of the project

For more complex projects, please include as many **continuation or illustration sheets** as you need to present a clear picture to the commission of your proposed work.

- Drawings – black or blue black ink on white paper. Electronic submittions are encouraged. Drawings should include dimensions of the existing part of the building and the proposed work.
- You need submit only one set of drawings; city staff will make the necessary copies.
- Use the checklist to be sure you have supplied all the important information.
- For new construction) exterior stairs, new garage, reconstructing a porch, etc) a site plan WITH a north arrow is required.

*(_____) *This property has at least one working smoke detector for each dwelling unit. Please initial to verify at least one working smoke detector in each dwelling unit. This is REQUIRED by state law or the application will be considered incomplete.*

PHOTOS: The historic preservation coordinator is responsible for taking photographs of the proposed work and the structure. If you wish to take additional photos, one set is usually adequate for the commissioners to examine. You may also bring photos on a USB drive to share with the commission.

Emergency repairs: If damage occurs to a structure in a historic district, which requires emergency repairs, steps may be taken to secure the structure without the approval of the commission or the coordinator. Cover damaged windows or holes in a roof with tarps or wood to prevent further damage. Support dangling or loose elements or remove and store them. Notify the Coordinator of the damage to the structure on the first weekday available after the damage occurs and the coordinator will visit the structure as well as arranging a site visit by commission members to approve repairs if necessary. **THIS WILL BE DONE AS QUICKLY AS POSSIBLE IN ORDER TO FACILITATE REPAIRS OF THE STRUCTURE IN A TIMELY MANNER.**

If you have questions about completing this application for project review, please call the Historic Preservation Coordinator at: (269) 337-8804 or by email at PenaL@kalamazoocity.org

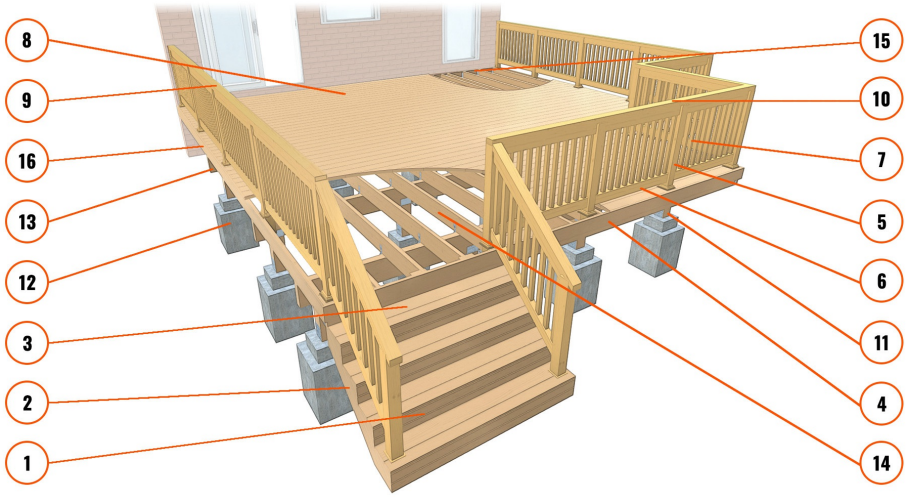
Glossary Of Decking Terms



1. Risers: The vertical boards attached to the stair stringers. Many localities require risers to prevent possible trip hazards.

2. Stringers: The structural support for stairs. They have limits on how much weight they can carry, so size and spacing are important considerations. Composite manufacturers provide recommended stringer spacing to support the tread material.

3. Treads: The horizontal stair surfaces on which deck users walk.

4. Rim Joist: Also known as edge bands, the rim joist wraps the deck and keeps the joists standing on edge, while also providing a solid surface for attaching railing posts. Proper attachment is critical to installing a safe railing.

5. Rail Post: Vertical lumber member that supports the handrail and resists the outward force of people leaning on the railings.

6. Bottom Rails: Lumber members that connect to the rail posts and provide a solid surface for securing the infills.

7. Infills: Also known as balusters or pickets, the infills are connected to the top and bottom rails and provide a barrier against falls.

8. Decking: When properly attached to each joist and rim joist, the decking surface (whether wood or composite material) helps unify the entire structure.

9. Rail Cap: Much like the decking, the rail cap unifies the railing system and provides a decorative feature.

10. Top Rails: These members have the same stabilizing function as the bottom rails.

11. Post: Vertical structural member that supports the beams and attaches the deck to the footings using a post base.

12. Footing: Concrete element that serves as the foundation of the deck.

13. Beams: Structural members that support the decking floor joists. Beams are made of doubling 2x material and can be installed as a laminate, sandwiched, or notched into the post.

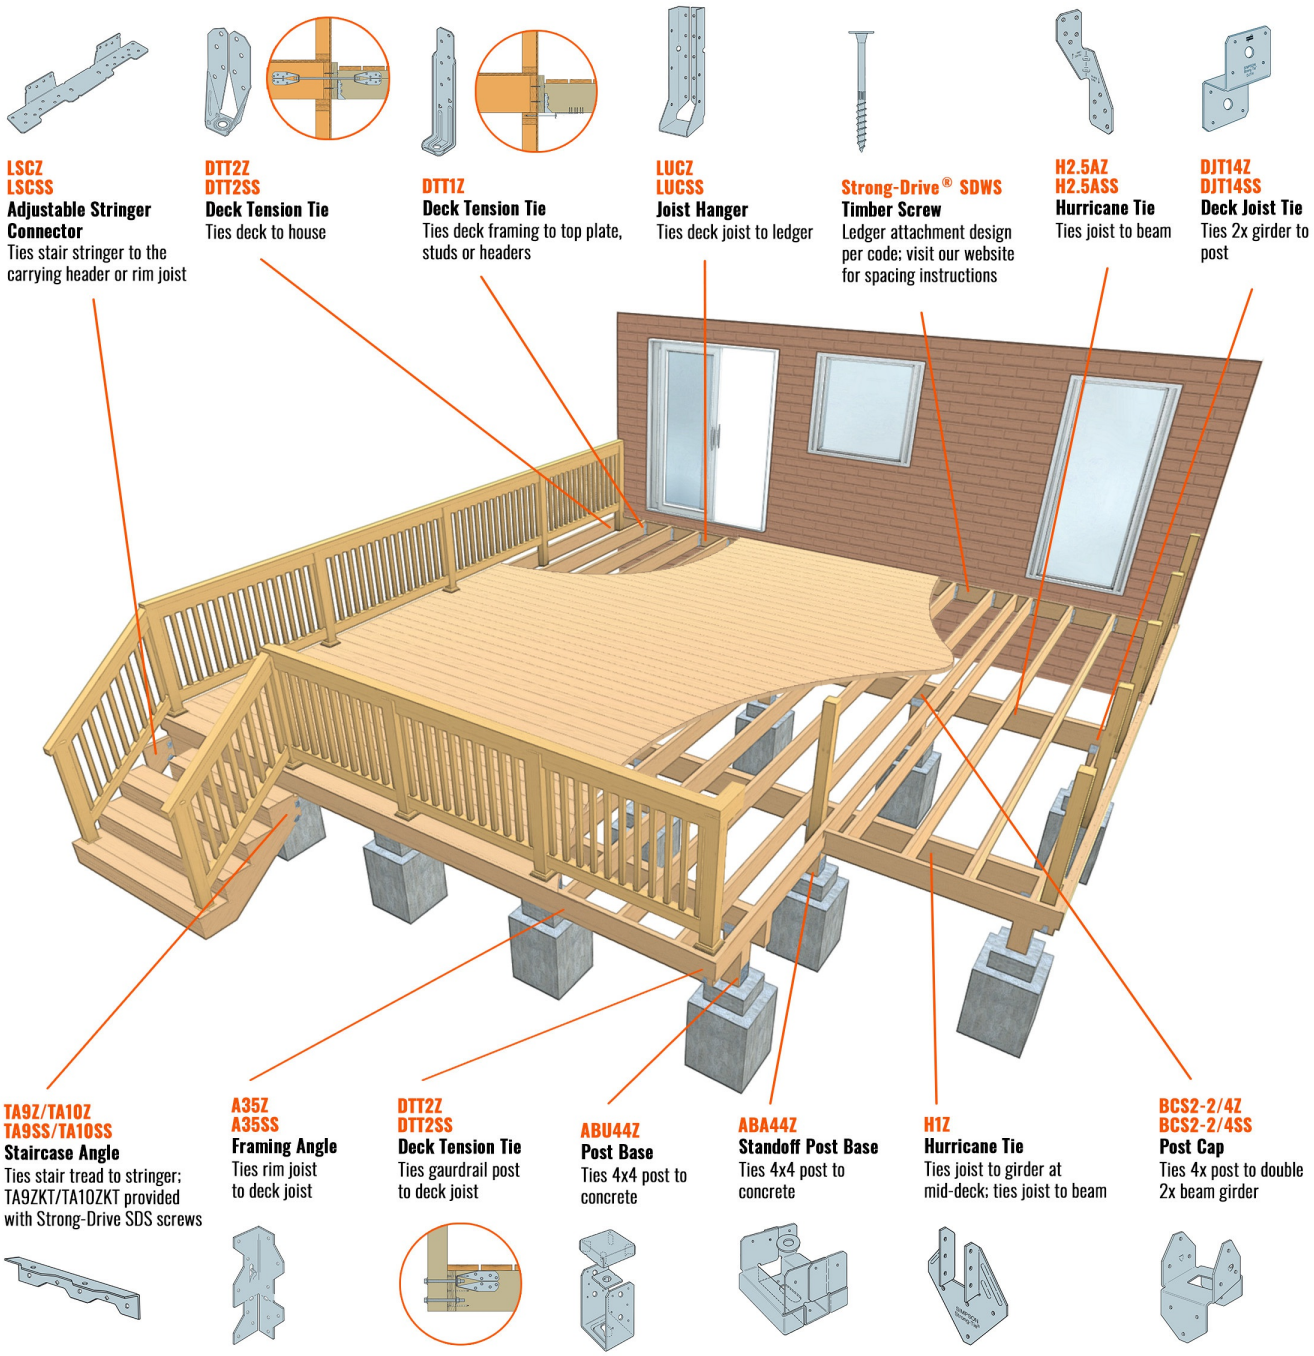
It is important to have a post of sufficient size and strength to support the beam. The beam should not be any wider than the thickness of the post, and should be secured with the correct post cap.

14. Joists: Wood members installed across the beams and spaced to accommodate the decking material. The joist spacing may depend on the angle at which the deck boards are applied.

15. Ledger: The ledger is a crucial connection because it attaches the deck to the house. The material used to construct the house may determine the type of connection. Consult local building officials on the recommended connection.

16. Fascia: Vertical boards that face outwards from the edges of the deck, attached to the rim joists. Fascia boards typically consist of a lumber species that matches the appearance of the decking material.

A Complete Connector System for Building Safer, Code-Compliant Decks



Installation Considerations

Building Code and Zoning Requirements

Check deed restrictions, building codes and zoning laws to make sure your deck complies. The local building jurisdiction will require a minimum setback from property lines. Check with local utility companies to make sure deck construction will not disturb underground piping or wiring (**dial 811 before you dig**)

A resource for general residential deck codes and building practices is the Prescriptive Residential Deck Construction Guide, by the American Wood Council (free download from www.awc.org).

The local building jurisdiction should be consulted to verify any building code requirements specific to the area.

Deck Function

While planning your deck, consider how it will be used. Sun/shade areas and possible views are common considerations.

Lumber

Pressure- or preservative-treated lumber, or lumber that is naturally decay resistant, should be used for durability. Cut edges should be field-treated with preservative.

Fasteners and Connectors

To resist corrosion, fasteners and connectors in contact with treated lumber should be ZMAX®, hot-dip galvanized (HDG) or made with stainless steel.

Consult with the building code, the preservative treatment manufacturer and strongtie.com to get recommendations for your conditions. Fasteners and connectors should be made of the same material (i.e. both of them galvanized, both of them HDG or both in stainless steel).

Ledger

Proper corrosion-resistant flashing should be installed between a deck ledger and the house. The ledger should be installed directly to the framing, with any siding removed.

Deck Area and Footing Layout

Batter boards (temporary wood supports, such as 2x4s), mason's string and a plumb bob can be used to lay out the deck area and footings. For a rectangular shape, the corners will be square when the lengths of the two diagonals are equal.

Footings

Holes for footings will need to be dug to a depth below the frost line.

Post Bracing

Diagonal bracing between posts and joists/beams should be installed according to the building code.

Posts and Beams

Allow an additional margin in length to the posts. Determine the desired deck floor height on the post and then cut to the appropriate length.

Attaching Joists

Attach joists to the ledger board with joist hangers.

Laying Decking

Drill pilot holes into the ends of boards to prevent splitting. Allow space between boards.

Guardrails

Guardrails must be adequately attached to the framing members of the deck. The building code has limits on the size of openings that are permitted in the guard system.

Stairs and Handrails

Stairs should be at least 36" wide. The building code has limits on the size of openings in a flight of stairs and specific directions for providing handrails.

Tools Required

The checklist provided should be used as a quick guide only,

Tips for the DIYer

- When cutting or drilling wood, always wear eye protection to prevent injury from flying wood particles.
- If cutting pressure treated material, wearing a fabric breathing mask will help to avoid ingestion of the dust.
- Wear gloves to protect from splinters.
- Invest in a pair of kneepads if you are doing floor jobs or working on a deck.
- Dispose of scraps in the regular trash or take to a landfill - do not burn pressure treated materials.

Historic District Commission Staff Report

City of Kalamazoo

TO: The Kalamazoo Historic District Commission

FROM: Luis Pena, Historic Preservation Coordinator

DATE: April 21, 2026

SUBJECT: 2. 471 W South ST - Alteration (Construction of new rear barrier free ramp, installation of one new door and window) PHDC26-004

PROPOSED WORK:

From the Description of Work Supplied by the Applicant: • Project Description: Add new exterior ramp and steps on the south side of the east
wing. Add new exterior door, interior landing, corridor, and ramp to connect to garden level inside of boiler room. Replace stair from garden level to sub-basement. Provide VPL to provide ADA access from new interior landing to sub-basement.
• Exterior modifications include addition of exterior concrete steps and handicap ramp with painted steel pipe railings, new insulated steel 2-panel rail and stile door with upper glazing, and infill of existing door opening with fixed window and masonry to match existing.

EVALUATION:

Project Details

Installation of a new barrier free ramp on the rear (south face) of the east wing of the building. The existing ramp will be demolished for the new ramp to be installed. The existing door will be infilled with a 6/1 wood window. The proposed window will be the same width as the existing door and same height as adjacent windows. The proposed door will replace a 6/1 window and will fit into the opening of the existing window. The door will be a steel 2 panel door with a quarter light.

Applicable Critera

Secretary of the Interior's Standards for Rehabilitation

2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.

While the door and window in question are historic, taken in isolation, they are not character defining (the door and window are sub grade and at the rear of the property). Removal of the window will not constitute the removal of features and spaces that characterize the property.

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.
All the proposed work (installation of the window, the door and the installation of he ramp, including handrails), will not destroy historic materials that characterize the property (see note above regarding the removal of historic materials or alteration of features and spaces that characterize the property).The new work will be differentiated from the old through the use of modern materials (the proposed door will be a modern steel door, and the window will have false removable grilles on interior of windows, not attached to the glass). Additionally, the length and grade of the ramp will be a future indicator that the ramp was installed to comply with ADA requirements.

10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.
Because the proposed window and door work will be removing and replacing existing features (even though the locations will be changed), the property could be reverted to the original configuration, especially if the historic window and door are kept. Additionally, the dimensions of the original ramp could be reverted.

City of Kalamazoo Local Historic District Standards and Guidelines

Doors
The guidelines largely deal with the replacement of existing rear doors. The guidelines do state, however, the following:
- If possible, a salvaged door of the same approximate age and style should be used. *A new door is being being proposed in this case*
- The finish of the door shall be appropriate to the design of the building. *The 2 panel finish of the door is similar to the existing door and is appropriate to the design of the building.*
- *The primary or front door must be made of wood in an appropriate design. Metal paneled doors will be considered on the side and at the rear of a house.* The proposed door is at the rear of the property and is a panel metal door.

Windows
The guidelines do not deal with the new installation of windows, instead the guidelines largely deal with replacement of existing windows. There is an illustration showing how windows should replace doors, but it largely deals with the replacement of siding beneath the new window. There will not be wood siding beneath the window in this case, instead there will be concrete.

Barrier Free Access Ramps

All ramp designs must be reviewed by the full commission. Preferably, ramps will be placed at the rear or as unobtrusively as possible on the side of the structure. For example, if the only possible location for a ramp is at the front, its impact can be minimized with the use of pipe rail for the sides instead of a rail using balusters like a porch rail. If a portion of the porch rail must be removed to allow the ramp to be attached, that piece of rail shall be preserved and stored on the premises in a protected environment to allow for its preservation and possible restoration at a later date. (Sometimes the removed rail can be stored under the porch, hanging from large storage hooks attached to the frame.) A barrier free ramp should be designed to be removable with minimal impact on the historic structure.

The proposed ramp will be located at the rear of the property. As noted above, he proposed ramp could be removed in the future without negatively effecting the historic property.

Discussion

The National Park Services has published a preservation brief about making historic properties accessible, and a three step approach is recommend to identify and implement accessibility modifications that wil protect the integrity and historic character of historic properties:

1) Review the historical significance of the property and identify character-defining features; *The National Register Nomination for the Marlborough does not include much detail but the building is cited as being architecturally significant. Features listed are the U shape, the height of building, Mediterranean bracketing and tiling about the roof line, delicate colored glass windows and the courtyard to the west of the building. The proposed ramp will not impact any of the listed elements.*

2) Assess the property's existing and required level of accessibility; *Currently, there is a staircase to the front of the property, and a rear staircase. This does not allow ADA access to the building*

and 3) Evaluate accessibility options within a preservation context. *Placing the ramp at the rear of the will have minimum impact on the historic integrity.*

POTENTIAL ACTIONS:

1. The proposed work complies with the Secretary of the Interior standards 2, 9 and 10. **Action: Motion to approve a Certificate of Appropriateness for the work as described in the application.**

2. More information is needed. **Action: Motion to postpone until the HDC meeting on 19**

May 2026 and direct the applicant to provide the requested materials and information to the Historic Preservation Coordinator by noon on 12 May 2026.

3. Denial of the application. **Action: Motion to deny the application based on Secretary of the Interior Standards 2, 9 and 10**.

Example #2: Instead of "New front door"
Say "Install a new wooden front door to fit original opening in width and height, to replace the existing metal paneled door. See drawing/photo for appearance" Specify the measurements of the width and height of the original opening. Include a storm door if that is part of the project

For more complex projects, please include as many **continuation or illustration sheets** as you need to present a clear picture to the commission of your proposed work.

Emergency repairs: If damage occurs to a structure in a historic district, which requires emergency repairs, steps may be taken to secure the structure without the approval of the commission or the coordinator. Cover damaged windows or holes in a roof with tarps or wood to prevent further damage. Support dangling or loose elements or remove and store them. Notify the Coordinator of the damage to the structure on the first weekday available after the damage occurs and the coordinator will visit the structure as well as arranging a site visit by commission members to approve repairs if necessary. **THIS WILL BE DONE AS QUICKLY AS POSSIBLE IN ORDER TO FACILITATE REPAIRS OF THE STRUCTURE IN A TIMELY MANNER.**

PROJECT SUMMARY

Abonmarche Byce was tasked with the study and preparation of design options for improving ADA access to the Marlborough Condominiums. Our process included meeting with the Condo Board to discuss goals and objectives, site visits to confirm existing conditions, presentation to and input of condominium tenants, and a presentation of preliminary options to the Condo Board and tenants.

EXISTING CONDITIONS

The existing south courtyard area includes several features of the building:

- ADA building access with the existing elevator
- Loading dock
- Trash dumpster access and enclosure
- Access to the egress stair tower and freight elevator
- Access to parking

The existing ADA elevator currently has 3-stops and provides access to the grade level (0'0"), garden level (-4'0"), sub-basement level (-8'0"). This elevator is small, aged, replacement parts and repair are difficult to procure, and its current lifespan is limited.

SUMMARY OF OPTIONS STUDIED

- Option #1A – Replace existing elevator with new LULA to grade level
- Option #1B – Replace existing elevator with new LULA to first floor level
- **Selected Option #2A – Exterior ADA ramp with interior corridor and VPL**
- Option #2B – Exterior ADA ramp w/ interior corridor, VPL and garden level floor infill

OPTION #2A – EXTERIOR RAMP WITH INTERIOR CORRIDOR AND VPL

Historic District Commission Staff Report

City of Kalamazoo

TO: The Kalamazoo Historic District Commission

FROM: Luis Pena, Historic Preservation Coordinator

DATE: April 21, 2026

SUBJECT: 3. 111 Portage - Alteration (Installation of 2 signs) PHDC26-005

PROPOSED WORK:

From the Description of Work Supplied by the Applicant: Install 2 wall signs on building. 1 on west, 1 on north. Signs are illuminated and secured in mortar joints.

EVALUATION:

Project Details

Installation of 2 signs on the property, one on the north face and one on the west face of the property.

Applicable Critera

Secretary of the Interior's Standards for Rehabilitation

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.

The proposed signs can be installed in a way that will not destroy the property, by anchoring the signs in the mortar joints. The applicant states this is how the sign will be anchored. The signs will be differentiated from the historic building through the use of new materials and technologies (plastic and metal signs with internal illumination). The proposed signs are compatible with the historic building in massing, size and scale.

10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

As the proposed signs will be anchored in the mortar joins, they could be removed in the future without impairing the historic character of the building.

Local Historic District Standards and Guidelines

- Signs shall not be placed so as to conceal or disfigure any architectural feature of a building. The style and size of all signs shall be visually compatible with the buildings on which they are attached. *The proposed signs will not conceal or disfigure any architectural features on the building.*

Discussion
The proposed signs would not impair the historic character of the property, and the proposed signs could be removed in the future without impairing the historic character of the structure.

POTENTIAL ACTIONS:

1. The proposed work complies with the Secretary of the Interior standards 9 and 10. **Action: Motion to approve a Certificate of Appropriateness for the work as described in the application.**

2. More information is needed. **Action: Motion to postpone until the HDC meeting on 19 May 2026 and direct the applicant to provide the requested materials and information to the Historic Preservation Coordinator by noon on 12 May 2026**

3. Denial of the application. **Action: Motion to deny the application based on Secretary of the Interior Standards 9 and 10**.

Historic District Commission Staff Report

City of Kalamazoo

TO: The Kalamazoo Historic District Commission

FROM: Luis Pena, Historic Preservation Coordinator

DATE: April 21, 2026

SUBJECT: 4. 830 W Vine - Alteration (Replacement of basement egress window) PHDA26-005

PROPOSED WORK:

From the Description of Work Supplied by the Applicant: Replace egress window in basement bedroom The window is on the right side of the house under the stairs to the upstairs level. We will be replacing with identical size and same operation. Also upon 2nd inspection the window had been replaced in the past with a vinyl exterior, wood interior window. We would be replacing with a full vinyl window.

EVALUATION:

Project Details
Replace existing basement egress window with vinyl egress window.

Applicable Critera

Secretary of the Interior's Standards for Rehabilitation

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.
The window in question being replaced is not historic. The new window will be differentiated from the old through the use of modern material. The proposed window will fit the existing opening., thus protecting the historic integrity.

10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.
The proposed window could be removed in the future without impairing the historic character of the property.

Local Historic District Standards and Guidelines
Windows

- The dimension of the original window must be retained. *It appears the original dimensions will be retained.*
- Aluminum and vinyl clad windows do not meet the above requirements. Vinyl plastic windows are not acceptable because they are made of non-historic materials and do not comply with the Secretary of the Interior's Standards for Rehabilitation. *According to the applicant, the existing window is vinyl clad*

Discussion
The existing window was administratively approved for installation in 2017, but it should be noted that the application submitted in 2017 stated the window would be wood. The placement of the window is not visible from the street, and the installation of a synthetic window would not detract from the historic character of the property.

POTENTIAL ACTIONS:

1. The proposed work complies with the Secretary of the Interior standards 9 and 10. **Action: Motion to approve a Certificate of Appropriateness for the work as described in the application.**

2. More information is needed. **Action: Motion to postpone until the HDC meeting on 19 May 2026 and direct the applicant to provide the requested materials and information to the Historic Preservation Coordinator by noon on 12 May 2026.**

PROPOSED WORK:

EVALUATION:

Project Details

Applicable Critera

Secretary of the Interior's Standards for Rehabilitation

1. A property shall be used for its historic purpose or be placed in a new use that requires minimal change to the defining characteristics of the building and its site and environment.

2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.

3. Each property shall be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other buildings, shall not be undertaken.

4. Most properties change over time; those changes that have acquired historic significance in their own right shall be retained and preserved.

5. Distinctive features, finishes, and construction techniques or examples of craftsmanship that characterize a historic property shall be preserved.

6. Deteriorated historic features shall be repaired rather than replaced. Where the severity of

deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.

7. Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means possible.

8. Significant archeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken.

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.

10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.
